

khi 1

```
abstract class xe may {  
    abstract void brake ();  
}
```

```
class xe may she thao extends xe may {  
    @Override  
    public void brake () {  
        System.out.println("xe she thao  
        ching");  
    }  
}
```

```
class xe ba nui extends xe may {  
    public void brake () {  
        System.out.println("xe ba nui  
        ching");  
    }  
}
```

Override

```
class Main {  
    public static void main (String[] args) {  
        xe ba nui m1 = new xe ba nui ();  
        m1.brake ();  
        xe she thao s1 = new xe she thao ();  
        s1.brake ();  
    }  
}
```

Bài 2

```
public abstract class shape {  
    private String color = "red";  
    public shape() {  
    }  
}
```

```
    public abstract void draw();  
    public String getColor() {  
        return color;  
    }  
}
```

```
}
```

```
public class rectangle extends shape  
@Override
```

```
    public void draw() {
```

```
        System.out.println("draw" +
```

```
super.getColor() + " rectangle");
```

```
    }
```

```
}
```

```
public class Circlerectangle extends shape  
@Override
```

```
    public void draw() {
```

```
        System.out.println("draw" +
```

```
super.getColor() + " circle");
```

 Thành Đạt

```
public class ShapeApp {  
    public static void main(String[] args)  
    {  
        Shape rec = new Rectangle();  
        rec.draw();  
        System.out.println(" --- ");  
        Shape Circle = new Circle();  
        Circle.draw();  
    }  
}
```

biên 3

```
abstract class Hình học {  
    private final float PI = 3.14f;  
    private String ten;  
    private float chu vi;  
    private float dien tich;  
    private float the tích;
